

TwinswHeel a major player in urban mobile robotics is the first manufacturer in the world to present a range of robots for all uses of urban logistics:

- ciTHy S to assist the elderly and people with reduced mobility in their travels, for example to do their shopping:
 - The robot can follow the person carrying their groceries. Once unloaded at home, it returns to the store on its own or the next user can use it as a cart through the aisles of the store
 - The robot can deliver groceries from the supermarket to the elderly on demand: <https://youtu.be/75V8Kcf2bVI>. This helps keep dependent people at home.

- ciTHy M to carry loads up to 150 kg with two main uses:
 - The robot assists technicians and craftsmen working in the city: <https://youtu.be/ZJ9Sspwfse4>. So they no longer need a car and they save up to 50% of time in a working day because there is no longer any constraint (traffic jam, parking, direction of traffic, no-vehicle zone, etc.)
 - The robot delivers small packages or food in total autonomy: <https://youtu.be/eRvewy95Uys>. For example, on university campuses they distribute sandwiches at noon.

- ciTHy L to carry loads up to 300 kg with two main uses:
 - Delivery of packages on tour to individuals: <https://youtu.be/rrdDukhObwM>
 - Pallet delivery to downtown merchants. Our robots are electric and sized for the load they carry. Thus, they prevent the emission of 5.4 tonnes of CO2 per year compared to a conventional van. What's more, our robots always arrive on time and don't block traffic every morning when unloading!

Our robots are all hyper mobile thanks to their 4-wheel drive, steering and suspension. Nothing stops them and they sneak around. Thanks to their multitude of sensors, our robots meet the strictest standards in terms of autonomous vehicles. Also they move extremely safely in the middle of cities. We are also the only company authorized in France to operate in autonomous mode among the population for freight operations.

Our robots are now deployed in several countries: France, Germany, Switzerland, United States. They accomplish many missions....
